Tax-on-a-Me Application - Version 12.0 Changelog

🚀 Major Features Added

AI Optimization System Overhaul

- **Fixed decimal formatting** - All financial displays now show proper 2 decimal places
- **Enhanced Roth conversion analysis** with IRMAA impact calculations
- **Opportunity cost analysis** - Accounts for tax payment funds earning potential
- **Conservative recommendations** with safety buffers and age-based adjustments
- **Comprehensive cost analysis** including Medicare premium impacts
- **Professional disclaimers** and assumption transparency

Comprehensive Help System

- **Context-sensitive help** buttons throughout the application
- **Step-by-step guides** for all major features
- **Interactive help modal** system with detailed explanations
- **Feature-specific guidance** in key sections
- **Best practices** and optimization tips

Enhanced Branding System

- **CRM integration** with automatic institution matching
- **Library-based approach** - upload once, use everywhere
- **Client-specific branding** overrides with dropdown selection
- **CSV import** with institution field for auto-assignment
- **Professional workflow** support for multi-institutional practices

🔧 Technical Improvements

AI Optimization Logic

- **IRMAA threshold awareness** - Avoids Medicare premium bracket jumps

- **Tax bracket optimization** - Stays within current brackets when beneficial
- **Multi-factor analysis** - Considers taxes, IRMAA, and opportunity costs
- **Age-based recommendations** - More conservative for older taxpayers
- **Realistic conversion amounts** - Capped at reasonable levels

Help System Architecture

- **Modal-based help** system with rich content
- **Accordion components** for organized information
- **Context-aware content** based on current section
- **Searchable help** content with clear navigation

User Experience

- **Improved navigation** with help buttons in key locations
- **Professional interface** with consistent styling
- **Better error handling** and user feedback
- **Responsive design** improvements

🎯 Business Value

Professional Tax Planning

- **More accurate recommendations** that account for real-world factors
- **IRMAA awareness** prevents costly Medicare premium mistakes
- **Multi-institutional support** for diverse client bases
- **Professional documentation** and help system

User Adoption

- **Comprehensive help** reduces learning curve
- **Context-sensitive guidance** improves feature discovery
- **Professional appearance** suitable for client presentations
- **Reduced support burden** through self-service help

📋 Current Feature Set

Complete Authentication System

- Multi-user support with role-based access control
- Admin, Advisor, and Assistant permission levels
- Client sharing and collaboration features
- Secure session management

Advanced Client Management

- Client profiles with comprehensive data fields
- Household linking and management
- CSV import/export with institution matching
- Client-specific branding and disclosures
